DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/14/07 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kugler et al. (6,280,466) in view of Rhodes (5,665,117). Kugler et al. disclose a system comprising a bifurcated stent-graft comprising having a first portion (50), a second portion (52) and an intermediate section (55) between the first and second sections, a plurality of extending legs (18, 19), and two bypass prosthesis/graft (14, 16) attached to the second portion and a plurality of extending legs (18, 19). Although, Kugler et al. do not disclose the sealing material attached to at least one of the proximal and distal sections, attention is directed to the Rhodes reference which discloses a bypassing system comprising hemostatic seal (90, 92) formed of a mesh, foam, etc...

Art Unit: 3731

(col. 9, lines 13-30) attached to proximal and distal ends of a stent or stent-graft for sealing the annular interface region between the outer surface of the bypassing system and the inner wall of the blood vessel lumen at each end of the aneurysm by promote hemostasis. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ sealing materials in view of Rhodes into proximal and distal sections of the system of Kugler et al. in order to enhance the placement of the Kugler et al.'s system at implanted site by seal the aneurismal space.

Election/Restrictions

4. This application contains claims 29-37 drawn to an invention nonelected with traverse in Paper filed on 11/7/05. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.
